

PAT™

LONGRANGERF

PERSONAL ALARM TRANSMITTER

Applications

- City wide emergency response
- Perimeter Security
- Airports
- Military bases
- Hospitals
- Medical Care Programs
- Camp Protection
- Mobile Monitoring
- Embassies
- Prison and Security
- Guards

KPs' light weight, long range Personal Alarm Transmitter, is a unique radio emergency unit.

Simple to operate and small enough to conceal, the PAT is an ideal device for a powerful yet discreet method of alarm communication.

Commonly used by Security personnel, the PAT has proven to be a decisive device protecting and assuring employees well being.

Wireless, installation free, and powerful, the PAT is ideal for mass application of emergency buttons. In this common application, the PAT is used as an emergency button, offered as a service by municipalities. The objective is having a cost effective and reliable method of communication for local residents. In an emergency, the buttons are pressed and a silent alarm message is instantly sent to a central station.

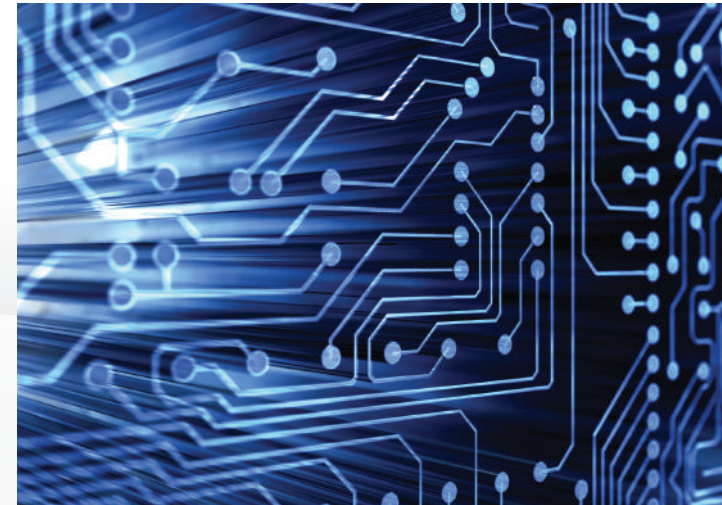

Operators can now react quickly and accurately by identifying the person in danger and their usual location.

Thus, signals sent in a split of a second offers unmatched response time by local security authorities.
